

# Connecting To Nature

## Making Homes for Minibeasts

**Minibeasts, creepy crawlies, insects—they are all super important for nature and they need our help! A simple way we can help is by building homes for them in our gardens or local parks.**

### **A Minibeast home au naturel!**

*If you have a garden or yard, no matter how big or small, there may be an opportunity to develop a natural minibeast home..*

**Resources and materials** that could be used (but you may be more creative and think of other things):

Wooden logs and sticks  
Pine cones,

Moss , Dry leaves  
Woodchips

### **How to:**

- You can use lots of natural materials such as sticks, leaves, moss and make a them into a pile, with lots of gaps and holes for these to crawl inside.
- Or if you have an empty plant pot or outdoor container, you could put all these natural things inside, arranged messy or neat. It helps if there are holes at the bottom to allow the minibeasts to move in and out. Feel free to add a welcome sign.
